RECOMMENDATION LETTER

"I had the pleasure of directly managing **Mr. Nithun Sundarrajan** during his 10-week internship at Trominosoft, where he worked as an AI/ML Engineer. From day one, **Nithun** impressed me with his strong technical foundation, structured approach to problem-solving, and his ability to deliver results that went well beyond expectations.

One of his key contributions was curating high-quality datasets for 100+ mock medical centre and MICC examples, applying best-in-class data engineering practices to ensure accuracy, consistency, and scalability. He also played a central role in building a chatbot system that seamlessly integrated with APIs, activated workflows, and maintained reliable session management—a solution that showcased both technical depth and an understanding of real-world deployment challenges.

Nithun explored and implemented different architectural approaches, including n8n workflow automation and Microsoft Azure integrations, demonstrating both versatility and a forward-looking mindset in evaluating the right tools for the problem at hand.

Beyond his technical skills, **Nithun** displayed remarkable ownership, adaptability, and collaboration. He consistently communicated complex ideas with clarity, worked seamlessly across functions, and brought creativity and initiative to every task. His ability to balance precision with innovation made his contributions highly impactful.

Nithun has the rare mix of technical rigor, business awareness, and professional maturity that makes him stand out among his peers. I am confident that he will excel in any future role he takes on, and I wholeheartedly recommend him as a strong asset to any organization."

For **TrominoSoft LLP.**
