Letter of Recommendation

To Whom It May Concern,

I am writing to recommend Nithun, who worked with mytender.io from July 14th, 2025 to January 15th, 2026. During his seven months with us, Nithun made meaningful contributions to our AI engineering capabilities while juggling the demands of his university degree.

Technical Contributions

Nithun joined us primarily as an AI engineer and delivered particularly strong results in this domain:

- **Built our custom evaluation framework** from initial tooling concepts into a production system with 40+ evaluators that we rely on daily
- **Developed intelligent trace analysis** using LangChain software to identify and analyse system behavior
- **Implemented AI/ML systems** including tool calling with LangChain and LangGraph, RAG pipelines, and prompt engineering
- **Researched and analysed multiple LLMs** and architectures, helping us make informed decisions about model selection and implementation
- **Delivered front-end implementations** capably despite being primarily an AI engineer, demonstrating adaptability and willingness to learn full-stack development

Personal

What impressed me most about Nithun was his extraordinary work ethic and energy. He would regularly work until 1:30 AM to complete tasks, all while managing his university commitments. His communication was excellent throughout - he kept the team informed, asked thoughtful questions, and wasn't afraid to dive into complex problems.

As our CTO and Co-founder Nicholas Dikreuter, a former VP and quantitative trader at Barclays, said: *"Nithun was fantastic at analyzing the models and had a real hunger and energy to be better and strive for improvements in our AI systems. He was really great to work with."*

Nithun brought remarkable confidence and intrigue to a team of more experienced engineers. Rather than being intimidated, he engaged actively, contributed ideas, and demonstrated genuine curiosity about improving our systems. His energy was infectious and his eagerness to learn made him a pleasure to work with.

Recommendation

I believe Nithun's combination of AI engineering capability, work ethic, and communication skills will serve him well in his career. He has the technical foundation, intellectual curiosity, and personal drive to succeed in demanding engineering environments. Any organization looking for an AI engineer with strong fundamentals and the determination to continuously improve would benefit from having Nithun on their team.

Please feel free to contact me if you require any additional information.
